PROFESSIONAL SUMMARY

Python/Django web developer and CS graduate (SZABIST Islamabad, 2026) with hands-on experience building full-stack web applications, browser automation systems, and web scraping tools. AI/ML certified (NAVTTTC) with practical deep learning and NLP project experience. Seeking a junior web developer or backend developer role.

EDUCATION

BS Computer Science, SZABIST Islamabad

2022 - 2026 (Completed)

CGPA: 3.11 / 4.00 | Relevant Coursework: Artificial Intelligence, Digital Image Processing, Intro to Data Science, Probability & Statistics, Linear Algebra, Data Structures & Algorithms, DBMS, OS, Computer Networks

CERTIFICATIONS & TRAINING

AI, Machine Learning & Deep Learning - NAVTTTC

Govt. of Pakistan

- Govt. certified program covering Python, ML algorithms, Deep Learning, and Neural Networks from basics to advanced.
- Worked on data preprocessing, model training, and evaluation using Jupyter Notebook and Python libraries.

TECHNICAL SKILLS

Backend: Python, Django, REST APIs, Selenium (automation & scraping)

Frontend: HTML5, CSS3, JavaScript, React (basics), Node.js (basics)

Database: MySQL, SQLite, Firebase

Scraping: Selenium, BeautifulSoup, Requests, Python

AI / ML: TensorFlow, Keras, scikit-learn, OpenCV, NumPy, Pandas, Matplotlib

Tools: Git, Docker, VS Code, PyCharm, Jupyter Notebook, MySQL Workbench

PROJECTS

Faculty Tasks Automation System

Final Year Project | 2025 - 2026

Python, Django, Selenium, Google APIs, Git

- Built all 12 modules solo, handled everything from documentation to final implementation.
- Developed data pipelines for student performance tracking, CLO achievement analysis, and at-risk student detection.
- Used Python and Selenium to automate marks entry, attendance tracking, and report generation.

ZABDESK Dummy Portal

Frontend | Web Dev | github.com/Hamdan-a11y

HTML5, CSS3, JavaScript

- Recreated the SZABIST university portal ZABDESK UI as a pixel-accurate frontend clone.
- Implemented multi-page navigation, login form, and responsive legacy-style layout from scratch.

Discord Meme Bot

Python | Reddit API | github.com/Hamdan-a11y

Python, Discord.py, PRAW (Reddit API), JSON

- Built a Discord bot that fetches and delivers random memes from Reddit subreddits on command.
- Integrated the Reddit API via PRAW with async command handling and graceful error management.

JavaScript Chess Game

Frontend | JavaScript | github.com/Hamdan-a11y

HTML5, CSS3, Vanilla JavaScript

- Built a fully functional browser-based chess game with move validation and turn management.
- Implemented all piece logic, check/checkmate detection, and interactive UI with zero frameworks.

IMDB Web Scraper

Web Scraping | Python | github.com/Hamdan-a11y

Python, BeautifulSoup, Requests, Pandas

- Scraped and structured the top 50 IMDB movies (title, rating, genre, year) using BeautifulSoup.
- Cleaned and exported the dataset to CSV with Pandas for further analysis.

Transformer Language Model

Deep Learning | NLP | github.com/Hamdan-a11y

Python, TensorFlow, Keras, MultiHeadAttention, Seq2Seq

- Built a Transformer from scratch for sequence-to-sequence translation using Multi-Head Attention and Embedding layers.
- Implemented full encoder-decoder pipeline with tokenization, positional encoding, and attention mechanisms.

Spam Email Classifier - Naive Bayes from Scratch

ML | NLP | github.com/Hamdan-a11y

Python, Naive Bayes, NLP

- Written from scratch in pure Python, no ML libraries, to understand the math behind probabilistic classification.
- Includes a built-in demo dataset and interactive mode for real-time email classification.
